Zulu Time (Dual Time) Instruction Manual

Zulu Time (Dual Time) Instructions Manual

The world is divided into 24 time zones. For easy reference, a letter of the alphabet has been assigned to each time zone (less the letters "I" and "O"). Greenwich Mean Time, or GMT, is used as the standard time for international reference in the fields of communications, military, maritime, and others that cross time zones. The letter designation for this time zone in England is **Z**, pronounced **ZULU** in the phonetic alphabet.

Zulu Time Line of Watches has 2 distinct models. One uses a turning internal bezel to mark a different time zone (dual time), while the other uses an additional hand completing a full circle once every 24 hours. Both can denote a second time zone

24 Hours (GMT)

To set the time – pull out the crown 2 steps and turn.

To set a different time zone – pull out the crown one step only. Turn to one direction to change the date and the other to set the 24-hour hand to indicate a different time zone of your choice. The hand will complete a circle once every 24 hours as opposed to the regular hour hand, which completes a circle every 12 hours.

Example: if you are in New York City, at noon, and wish to track the time in Rock Springs, Wyoming (2 hours behind New York), turn the crown until the red 24h-hour hand points to 10:00 on the 24-hour scale (5:00 on the 12-hour scale).
